LOCALIZED STRICT TOPOLOGIES ON MULTIPLIER ALGEBRAS OF PRO- C^* -ALGEBRAS

ALEXANDRU CHIRVASITU

ABSTRACT. The bounded localization β_b of a locally convex topology β is defined as the finest locally convex topology agreeing with β on all bounded sets. We show that the strict topology on the multiplier algebra of a bornological pro- C^* -algebra equals its own localization, generalizing the analogous result due to Taylor for multiplier algebras of plain C^* -algebras.

We also (a) characterize the barreled commutative unital pro- C^* -algebras as those of continuous functions on functionally Hausdorff spaces whose relatively pseudocompact subsets are relatively compact, equipped with the topology of uniform convergence on compact subsets, and (b) describe a contravariant equivalence between the category of commutative unital pro- C^* -algebras and a category of Tychonoff (rather than functionally Hausdorff) topological spaces.

2020 *Mathematics Subject Classification.* 46L05; 46L85; 46A08; 18A30; 18A35; 46A13; 46M40; 47L40; 54D10; 54D15; 54D30; 54D35; 54D50; 54D80; 54B05; 54B30; 46A03; 46A04.

Key words and phrases. pro- C^* -algebra; σ - C^* -algebra; locally convex; seminorm; polar; absolutely convex; barrel; bornological; bounded set; localization; strict topology; multiplier algebra; Tychonoff space; completely regular; completely Hausdorff; functionally Hausdorff; compactly generated; κ -space; adjunction; limit; colimit; compactification; ultrafilter.

This work is partially supported by NSF grant DMS-2001128. I am grateful to G. Lukács for bringing relevant prior work to my attention, for many useful comments and pointers from M. Tobolski and A. Viselter, and for the anonymous referee's patience and numerous excellent suggestions for the improvement of an early draft.
